

Is the user's choice of representation <sup>1</sup> pressured by social situations

Is there such a thing as digital representation in a digital environment vs. digital representation in the material environment? <sup>2</sup>

One must consider current forms of digital representation that we now <sup>3</sup> believe to be identity such as credit cards

## Representation

If intellectual capacity is permanent, will jobs ever open up?

— The implications of freeing the <sup>4</sup> thinking mind from the physical bodies

## Physical Consciousness

A redefining of death limiting it to the physical body, where <sup>5</sup> the consciousness is eternally preserved in digital format.

Impending social impact: Taxes, Healthcare costs, Environmental impacts

Will the avatar be a static stored digital material, or will it be mobile with the ability to migrate through and between systems?

Will digital consciousness avatars use VOIP to communicate between the material and digital world?

Will avatars use mobile devices to engage in experiential interfaces?

## Storage

1. Notes for "Is the user's choice of representation pressured by social situations":  
Is the digital representation manipulated to conform to any sort of social expectations in the digital world? If it is, is this any different than changing clothes to match societal expectations?
2. Notes for "Is there such a thing as digital representation in a digital enviro...":  
Are the discrepancies in these two forms of self representation a lie, or are they a function of the interface?
3. Notes for "One must consider current forms of digital representation that we n...":  
Is identification a for of representation? If the user is not satisfied with his identification as his representation can he choose to identify through altered representation and will society accept that?
4. Notes for "The implications of freeing the thinking mind from the physical bodies":  
If we can isolate consciousness a systematic set of electromagnetic impulses we can separate / capture consciousness and transfer it into digital information.
5. Notes for "A redefining of death limiting it to the physical body, where the c...":  
This creates the capacity for a true digital afterlife when the body expire, or even when the body begins to deteriorate slightly.
6. Notes for "Maslows triangle of needs":  
Once all the physical needs are stripped, will a digital consciousness still require emotional support and to persists intact?
7. Notes for "Will and indefinite persistent existing networks permeate the Inter...":  
If consciousness is a hard saved file will networks be permeable so that consciousness will be able to interact?
8. Notes for "Will transformable appearance require persistent metadata so as to ...":  
If we are able to change our outward appearance so drastically will we need to have metadata so that we will always be able to identify ourselves? Even if we are able to change everything about our appearance will it truly change who we are?
